

1.0 Overview of the Project

The Campus Event Calendar project aims to provide a centralized platform for students, faculty, and external participants to manage and view campus events efficiently. This platform will enhance the visibility and participation of events while reducing the scattering of information.

2.0 Problem Statement

The current method of disseminating information about campus events is scattered and inefficient, leading to low participation and resource wastage. There is a growing need for a centralized system to manage and notify users about campus events.

3.0 Proposed Solutions

- Develop a centralized platform to manage and notify users about campus events.
- Create a user-friendly interface for easy access to event information.
- Implement a system that supports RSVP for events, course scheduling, and assignment tracking for students and faculty.
